

MA200 Aperture A/D M/MA Module

The MA200 is a 100KSPS 12-bit A/D converter module that will sample and selectively store differential analog signals along with a 31-bit time stamp at a rate up to 100KSPS. The 31-bit time tag allows almost six hours of uniquely time tagged data, at a resolution of 10 microseconds, to be stored by the host. The module has the ability to convert and store all data at the specified sample rate or selectively store input values that exceed the range of the programmed aperture window. This technique provides extensive real-time data compression for transient type input signals.
