

AM100 Buffer IP Accessory:

The AM100 provides dual output signal buffering for other C&H IP source modules. The module attaches adjacent to other specially designed C&H IP modules through a 10-pin side connector. One or two output signals from the source IP module are buffered to provide up to $\pm 300\text{ma}$ drive capability that will not oscillate while driving large capacitive loads. The buffers slew at $800\text{V}/\mu\text{s}$ and have a small signal bandwidth of 50 Mhz while driving a 50Ω load. They feature built-in current limiting and thermal shutdown. Output impedance is typically 3Ω .

Ordering Information

Description	AM100 Buffer IP Accessory
Part Number	11027840-0001
