

# AM101 IP Extender/Breakout Board

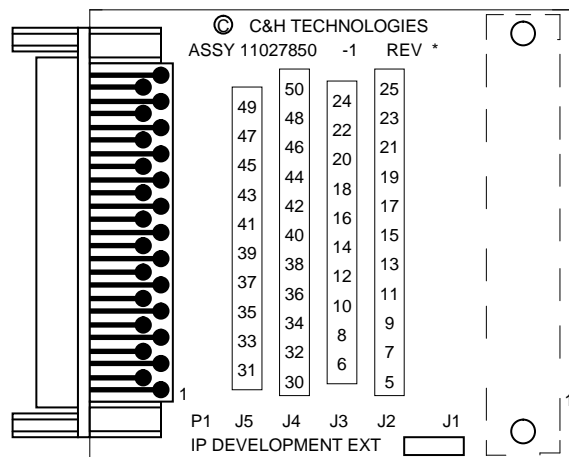

Assembly P/N 11027850-0001

## DESCRIPTION

The AM101 IP Extender/Breakout board eases the IP development cycle by providing easy access to the IP interface and I/O signals. The AM101 extender locks the IP at a right-angle to the carrier board, thus providing easy access to component side of the IP for signal probing. Signal breakout pins allow attachment of logic analyzer and oscilloscope probes to each of the IP interface signals. All pins are appropriately labeled by IP pin number. The physical orientation of the AM101 allows for multiple instances on any platform carrier.

The extender is passive and therefore does not use any power.
